INITIAL NOTIONAL VALUE

₹10.00L

CURRENT PORTFOLIO VALUE

₹9.65L

ABSOLUTE P&L

-₹34.6K

CUMULATIVE RETURN

-3.46%

DATA THROUGH

07-Sep-2026

This is a notional target-weight portfolio. The ₹10.00 lakh starting value translates percentage portfolio performance into rupee terms. It does not represent an actual brokerage account or share-level transaction history.

PERFORMANCE

The portfolio's cumulative return of -3.46% translates the initial ₹10.00L notional value to approximately ₹9.65L as of 07-Sep-2026. Portfolio Sharpe of -0.54 vs NIFTY 50 -0.62.

RISK

Annualised volatility of 14.18% vs the index at 13.62%; maximum drawdown -17.99% vs -14.93%. Upside capture 19.9% and downside capture 21.1% — the portfolio suffered more of the index's down-weeks than it captured of its up-weeks — an unfavourable asymmetry.

DIVERSIFICATION

If the seven holdings moved in perfect lockstep the portfolio would carry 22.02% annualised volatility. It actually carries 14.18% — a reduction of 7.84%, or 35.6% of the naive risk, at a diversification ratio of 1.55x.

ATTRIBUTION

Reliance Industries consumes the largest share of portfolio risk at 26.9% of total variance, against a capital weight of 23.0%. Where risk share exceeds capital weight, the holding is contributing more volatility than its size suggests.
